

ABDALRHMAN MOHAMMED

Agentic AI & Automation Developer

+20 104 067 0522 | Alkrnz279@gmail.com

SUMMARY

Automation-focused developer specializing in building AI agents, workflow automations, and RAG-based systems that turn repetitive business processes into intelligent, self-running operations. Experienced in designing end-to-end pipelines that connect large language models with real-world tools, APIs, and data sources — from autonomous multi-agent research systems to customer-facing chatbots. Comfortable working independently across the full build cycle: scoping a problem, designing the workflow, implementing it, and handing over a documented, working system.

TECHNICAL SKILLS

Agents & AI Frameworks: LangChain, CrewAI, OpenAI APIs, Vector Databases, RAG (Retrieval-Augmented Generation)

Workflow & Automation: n8n, Webhooks, REST APIs, end-to-end automation pipeline design

Core Engineering: Python, JavaScript, Google Workspace APIs, PDF & document data extraction

TOOLS

Notion (project & workflow organization), Git, VS Code, ChatGPT & Claude for AI-assisted development

SOFT SKILLS

- **Analytical problem-solving** — breaking a messy business process into a clear, automatable workflow
- **Clear client communication** — translating non-technical requests into precise technical scope
- **Self-directed learning** — continuously picking up new frameworks and tools as the field evolves
- **Attention to detail** — critical when a single broken step can break an entire automation
- **Remote work discipline** — owning a project independently from scoping through delivery

SELECTED PROJECTS

- **AI HR Candidate Screening System** — An autonomous recruitment workflow built in n8n that parses incoming CVs, extracts structured candidate data, scores applicants against job criteria, and logs ranked shortlists directly into Google Sheets.
- **Multi-Agent Competitor Analysis System** — A CrewAI-based system using multiple coordinated AI agents to research competitors, gather and structure findings, and produce a consolidated business intelligence summary.
- **Restaurant AI Chatbot** — A conversational assistant handling customer inquiries, menu questions, and order-related interactions automatically, reducing manual front-desk workload.

CONTINUOUS LEARNING

Currently completing a hands-on course on building a GPT-style language model from scratch in PyTorch, to deepen core understanding of how LLMs work under the hood.
